November 2002  
Volume 11 Issue 3  
Our aim is to develop new database technologies for the approximate matching of unstructured string data using indexes. We explore the potential of the suffix tree data structure in this context. We present a new method of building suffix trees, allowing us to build trees in excess of RAM size, which has hitherto not been possible. We show that this method performs in practice as well as the  $O(n)$  method of Ukkonen [70]. Using this method we build indexes for 200 Mb of protein and 3 ...

 Steven J. DeRose , David G. Durand , Elli Mylonas , Allen H. Renear  
ACM SIGDOC Asterisk Journal of Computer Documentation August 1997  
Volume 21 Issue 3  
THE WAY IN WHICH TEXT IS represented on a computer affects the kinds of uses to which it can be put by its creator and by subsequent users. The electronic document model currently in use is impoverished and restrictive. The authors argue that text is best represented as an ordered

☐

**SEARCH**[\[Advanced Search\]](#) [\[Search Help/Tips\]](#)[Complete Search Help and Tips](#)**The following characters have specialized meaning:**

Special Characters	Description
, ( ) [	These characters end a text token.
= > < !	These characters end a text token because they signify the start of a field operator. (! is special: != ends a token.)
` @ \ Q < { [ !	These characters signify the start of a delimited token. These are terminated by the end character associated with the start character.

Google Search

The word "or" was ignored in your query -- for search results including one term or another, use capitalized "OR" between words. [\[details\]](#)

The "AND" operator is unnecessary -- we include all search terms by default. [\[details\]](#)

"and" (and any subsequent words) was ignored because we limit queries to 10 words.
